painting by Marie Denise Villers, which was at one time ascribed to Jacques-Louis David. Although little known today, she exhibited in the Salons, where her portraits attracted attention. This canvas may be a self-portrait. Marie Denise Villers (French, 1774–1821). Charlotte du Val d'Ognes (died 1868), 1801. #TheMet #WomensHistoryMonth

zhongqixx Amazing work 

sharon_getsis @bameroncoss she looks like she's on the office

carloszeronmedina Haha vi la imagen de Denise Villers y me acordé de ti! Se parecen! @jacquelinecastaneda ! Saludos!

bameroncoss @sharon_getsis HAHAHAHA YOURE SO RIGHT

Browser-based, High-fidelity Web Archiving

- Dynamic content & social media
 - Open-source, runs in browser
 - “human-centered” approach

The screenshot shows a web browser window with the URL <https://webrecorder.io/> in the address bar. The page itself has a light gray header with the site name "webrecorder.io" and navigation links for "Sign Up" and "Login". Below the header is a large, bold title "Welcome to Webrecorder Beta". Underneath the title, there are two descriptive paragraphs: "An open source web archiving platform and service for all!" and "Easily create high-fidelity, standards compliant archives of the web as you browse.". A section titled "Try now:" contains a form with a text input field labeled "Enter a url here", a blue "Record" button with a white play icon, and a checkbox labeled "Preview before recording". Below this form, a message encourages users to "build their own archives as we test this service." and provides a link to "Request an invite to sign-up". At the bottom, it states "A project of RHIZOME" and includes a yellow "Donate" button with the text "to support Webrecorder and related open-source web archiving tools. Donations will be tax-deductible." The browser interface includes standard elements like back/forward buttons, a search bar, and a menu icon.

Welcome to Webrecorder Beta

Record Record Missing Preview Replay https://www.instagram.com/metmuseum/

The screenshot shows a web browser window with the Webrecorder interface. The top bar displays the URL <https://webrecorder.io/record/https://www.instagram.com/metmuseum/>. Below the URL is a header with "Anonymous Collection" and a file size of "2.79 MB". There are buttons for "Browse Collection", "Auto Scroll", and "Doesn't look right?", along with "Sign Up" and "Login" links. A dropdown menu on the left is set to "Record" and shows the URL again. Below the header, there are several image thumbnails arranged in a grid. The first row contains three images: a classical painting, a vase on a pedestal, and a colorful tapestry or print. The second row contains three images: a photograph of a stone colonnade, a painting of a woman sketching at a window, and a photograph of the modern stone facade of the Metropolitan Museum of Art. The third row contains three images: a dark wooden panel, a painting of blossoming trees, and a portrait painting. At the bottom of the page is a footer with the URL <https://webrecorder.io/patch/20160310181935/https://www.instagram.com/metmuseum/>.

The screenshot shows a web browser window with the URL <https://webrecorder.io/> in the address bar. The page title is "Welcome to Webrecorder Beta". The main content area features a sub-headline: "An open source web archiving platform and service for all! Easily create high-fidelity, standards compliant archives of the web as you browse." Below this, there's a section titled "Try now:" with a form containing a text input field labeled "Enter a url here" and a blue "Record" button. There's also a checked checkbox for "Preview before recording". A message below the form reads: "We are inviting users to build their own archives as we test this service." followed by a link "Request an invite to sign-up". The footer includes a "Donate" button, a note about tax-deductible donations, and links for "Contact Us" and "Follow on Twitter".

Installation of Richard...

How did we get Richard Serra's "Sequence" into our expanding building? It took 12 flatbed trucks and quite a lot of hoisting, lowering, and welding over the course of a few days—watch it take form in about 2 minutes!

<https://github.com/ikreymer> : webarchiveplayer replay WARC files on your own computer

A screenshot of a web browser window. The address bar shows the URL https://github.com/ikreymer/webarchiveplayer. The page content is titled "WebArchivePlayer 1.3.0". It describes the tool as a desktop wrapper for viewing web archive files (WARC and ARC format). It explains how to create a WARC file using https://webrecorder.io/ and how the player allows users to browse local archive files. A section titled "Usage (Windows and OS X Apps)" provides download links for OS X and Windows.

WebArchivePlayer 1.3.0

WebArchivePlayer is a new desktop tool which provides a simple point-and-click wrapper for viewing any web archive file (in [WARC](#) and ARC format).

To create a web archive (WARC) file of your own, you can use the free <https://webrecorder.io/> service to browse any page and then download the recorded WARC file.

The player allows users to pick one or more ARC/WARC from their local machine and browse the contents from any browser. No internet connection is necessary in order to browse the archive.

Usage (Windows and OS X Apps)

1. Download the latest version:
 - [Download for OS X](#)
 - [Download for Windows](#)

1. Double click to open. (For OS X, open the .dmg file to mount the volume and extract the player). You may have to agree

[https://github.com/ikreymer : pywb](https://github.com/ikreymer/pywb)

build, index, replay web archives on your own computer

The screenshot shows a web browser window with four tabs open:

- https://webrecorder.io/
- ikreymer (Ilya Kreymer) · GitHub
- GitHub - ikreymer/pywb: Py... (active tab)
- GitHub - ikreymer/webarchi...

The main content area displays the PyWb 0.11.2 documentation. It features a title "PyWb 0.11.2" and several status indicators: "build passing" and "coverage 99%". The text describes PyWb as a Python implementation of web archival replay tools, mentioning its ability to replay complex dynamic sites and serve as a proxy. It also highlights its compliance with the Memento protocol (RFC-7089). A section titled "Getting Started -- Run your own Web Archive" is present at the bottom.

PyWb 0.11.2

build passing coverage 99%

pywb is a python implementation of web archival replay tools, sometimes also known as 'Wayback Machine'.

pywb allows high-quality replay (browsing) of archived web data stored in standardized [ARC](#) and [WARC](#), and it can also serve as a customizable rewriting proxy to live web content.

The replay system is designed to accurately replay complex dynamic sites, including [video and audio content](#) and sites with complex JavaScript.

Additionally, **pywb** includes an extensive [index query api](#) for querying information about archived content.

The software can run as a traditional web application or an HTTP or HTTPS proxy server, and has been tested on Linux, OS X and Windows platforms.

pywb is fully compliant with the [Memento](#) protocol ([RFC-7089](#)).

Getting Started -- Run your own Web Archive

With release 0.9.0, **pywb** provides new simplified, directory-based init system to create and run your own web archive replay

Web Archiving for Everyone

- 2016-2017: Webrecorder technical development
- Pilot projects & testing, collaboration with users
- Accessibility & interoperability
